

Listing of the Claims:

Claims 1- 31: (Cancelled).

Claim 32: (Previously Presented) The apparatus according to claim 59, wherein the selected service comprises a calendar service.

Claim 33: (Previously Presented) The apparatus according to claim 59, wherein the selected service comprises a login service.

Claim 34: (Previously Presented) The apparatus according to claim 59, wherein the template is selected from a plurality of templates based on the selected service.

Claim 35: (Previously Presented) The apparatus according to claim 34, wherein each template of the plurality of templates is specific to one of a plurality of services.

Claims 36- 46: (Cancelled).

Claim 47: (Previously Presented) The apparatus according to claim 35, wherein each template is further specific to one of a plurality of device types.

Claims 48-49: (Cancelled).

Claim 50: (Previously Presented) The apparatus according to claim 59, wherein:
the selection of the service is received from a browser configured to operate on the terminal.

Claim 51: (Previously Presented) The apparatus according to claim 59, wherein the data is further converted based on a user profile specifying a preferred language.

Claims 52-55: (Cancelled).

Claim 56: (Previously Presented) The apparatus of claim 59, wherein the selected template further includes instructions for formatting a layout of the data associated with the selected service.

Claim 57: (Cancelled).

Claim 58: (Currently Amended) An apparatus, comprising:
a request handler control configured to receive a request for data from a terminal;
a server control configured to:
determine response data responsive to the request; and
select a response template for processing the response data, the response template including instructions for converting the response data from a first language format to a second language format, wherein the second language format is selected based on one or more attributes of the terminal;

a page generator configured to:

generate a user interface through which the request for data is made, the user interface comprising:

at least one interactive element associated with at least one command, wherein the at least one interactive element is displayed without the at least one command in the interface in a first configuration; and

a menu object displayed proximate to the at least one interactive element, wherein selection of the menu object causes a menu including the at least one command to be displayed in a second configuration,

wherein selection of the at least one command is configured to cause an operation to be applied to the at least one interactive element irrespective of whether the at least one interactive element was selected prior to the selection of the at least one command; and

process the response data according to the selected response template and a user profile associated with the terminal; and

a HTML control configured to ~~send~~ determine a response including the processed response data to be sent to the terminal.

Claim 59: (Currently Amended) An apparatus comprising:

a processor; and

memory operatively coupled to the processor and configured to store ~~storing~~ computer readable instructions that, when executed by the processor, cause the apparatus to perform a method comprising:

generate a user interface through which a selection of a service is to be made, the user interface comprising:

at least one interactive element associated with at least one command, wherein the at least one interactive element is displayed without the at least one command in the interface in a first configuration; and

a menu object displayed proximate to the at least one interactive element, wherein selection of the menu object causes a menu including the at least one command to be displayed in a second configuration,

wherein selection of the at least one command is configured to cause an operation to be applied to the at least one interactive element irrespective of whether the at least one interactive element was selected prior to the selection of the at least one command,

receiving~~determining~~, at ~~by~~ the apparatus, ~~a~~ the selection of ~~a~~ the service, wherein the selection of the service is made through ~~from a terminal through a communication network;~~

~~identifying~~ identify one or more attributes of the terminal;

~~selecting~~ select a template including instructions for converting data associated with the service selected by the terminal from a first language format to a second language format, wherein the second language format is selected based on the one or more attributes of the terminal; and

~~converting~~ convert the data associated with the selected service based on the template; and

~~transmitting a response including the converted data to the terminal.~~

Claim 60: (Previously Presented) The apparatus of claim 59, wherein the template is selected based on a size of a display of the terminal and a capability of the terminal to support a signalling protocol.

Claim 61: (Cancelled).

Claim 62: (Currently Amended) A method comprising:

generating, by a server, a user interface through which a selection of a service is to be made, the user interface comprising:

at least one interactive element associated with at least one command, wherein the at least one interactive element is displayed without the at least one command in the interface in a first configuration; and

a menu object displayed proximate to the at least one interactive element, wherein selection of the menu object causes a menu including the at least one command to be displayed in a second configuration,

wherein selection of the at least one command is configured to cause an operation to be applied to the at least one interactive element irrespective of whether the at least one interactive element was selected prior to the selection of the at least one command,

receivingdetermining, at by a the server, a the selection of a the service made, wherein the selection of the service is made from through a terminal;

identifying one or more attributes of the terminal;

identifying a template including instructions for converting data associated with the service selected by the terminal from a first language format to a second language format, wherein the second language format is selected based on the one or more attributes of the terminal; and

converting the data associated with the selected service based on the template; and

~~transmitting a response including the converted data to the terminal.~~

Claim 63: (Previously Presented) The method of claim 62, wherein the one or more attributes of the terminal includes a signaling support capability of the terminal.

Claim 64: (Previously Presented) The method of claim 62, further comprising modifying the data associated with the selected service according to a user profile associated with the terminal.

Claims 65-70: (Cancelled).

Claim 71: (Previously Presented) The method of claim 62, wherein the template is identified from a plurality of templates, each of the plurality of templates is specific to one of a plurality of services.

Claim 72: (Previously Presented) The method of claim 62, wherein the first language format is not compatible with the terminal and the second language format is compatible with the terminal.

Claim 73: (Previously Presented) The apparatus of claim 58, wherein the first language format is not compatible with the terminal and the second language format is compatible with the terminal.

Claim 74: (Previously Presented) The apparatus of claim 58, wherein the response template is selected from a plurality of response templates, each of the plurality of response templates being specific to one of a plurality of services.

Claim 75: (New) The method of claim 62, wherein the user interface further includes a visual focus marker configured to identify a portion of the user interface to which commands are automatically applied, wherein the commands are not applied to one or more other portions of the user interface not identified by the visual focus marker.
